

Blue ocean leadership in organizations: a systematic literature review

Abstract

Leadership research has expanded rapidly. Therefore, for the reader to better understand it, there is a need to conduct a Systematic Literature Review on this topic. The objective of this paper is to review the dimension and influence of blue ocean leadership in different perspectives in Malaysia by using SLR.

1. Introduction

Blue ocean leadership (BOL) has received growing attention. This systematic literature review was performed to address the following questions: (a) What is the dimension of BOL? (b) What is the influence of BOL in different perspectives in Malaysia?

2. Methodology

We searched Scopus, Google Scholar and Dimensions. The search string used in Scopus was TITLE-ABS-KEY ("blue ocean leadership" OR "blue ocean strategy in leadership") restricted to articles published between 2014 and 2020 in English. Only research articles and conference proceedings with empirical data were included.

3. Study selection

The findings showed 45 articles collected from the selected databases. Next, we removed 12 duplicated articles. After screening for field of study and eligibility, a total of 10 papers went through to the final stage.

4. Results

The included studies show that blue ocean leadership practices vary considerably across organizational contexts and sectors.
